

**New g-plug™ Device Is Fastest, Easiest Way To Implement Federal Stimulus Cost Savings. Reduce Energy Costs By 65%.**

We are pleased to introduce the energy saving G-Plug. It is a new device designed and manufactured in Michigan, which can save 65% of your energy costs automatically on computers, printers, monitors and other peripherals. It is quite simply the easiest, fastest way to implement Green Federal Funding. By monitoring when the computer is turned off or when the room goes dark, the G-plug will automatically turn off all of your peripherals.

The G-plug is the only 100% passive device which operates with no user interface. Just plug it in, walk away and the G-plug does the rest. By automatically turning off peripherals, it saves energy, reduces maintenance costs and triples product life keeping it in use and out of landfills.

Employees, teachers and students rarely remember to turn off computers, let alone printers, monitors and coffee machines.

It is very easy to use and qualifies as an energy conservation device funded under the Federal Stimulus plan. Start your savings today.

The G-Plug can be installed in only sixty seconds and start saving energy and money today. It costs only \$69 and can save well over \$100 to \$200 per year. For every 100 watts controlled (up to 1,500 watts) you save \$65, ie 600 watts controlled saves \$390/yr.

To learn more about the g-plug, go to [www.g-plug.org](http://www.g-plug.org) or call 248-563-1471 or 248-669-0334.
